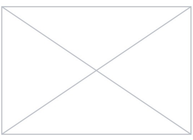
Onboarding delays hurt customer impressions

Customer onboarding often breaks down because every department uses their own tools and processes. Information gets lost, timelines stretch, and first impressions suffer.

Autopilot removes the bottlenecks by giving everyone one place to work, track, and collaborate.



Use one connected system for every customer onboarding

One platform to manage requirements, tasks, documents, KYC, handovers, and activation - giving your team a predictable, repeatable process for every new customer.

Automatically notify teams, track progress, prevent bottlenecks, and give every customer a smooth, consistent start.

See How It Works

Key Features That Matter

Guided Customer Journey
Give customers one simple, step-by-step flow to provide details and upload documents - no back-and-forth emails.

Automated Data & Document Collection
Capture customer information, supporting docs, and signatures through a structured, automated process that keeps everything organized from the start.

Multi-Team Checklists
Sales, Success, Finance, Ops - every team sees their tasks in one place so onboarding moves in parallel, not one slow step at a time.

Role-Based Visibility
Each team member sees exactly what they need for the customer they're supporting, with sensitive data protected by permissions.

Built-In Communication
Ask questions and share clarifications directly inside the flow (instead of spawning new email threads).

Document Generation & Signing
Automatically create customer forms, agreements, or compliance docs and send them for e-signature with a click.

Automatic Archiving
Completed customer documents sync straight into SharePoint, your CRM, or your document store - neatly organized, secure, and auditable.

AI-Driven Document Validation
Uploaded documents are checked for completeness and cross-verified against captured customer data, reducing errors and preventing onboarding delays.

Works with the tools your team already uses

Autopilot fits naturally into your existing environment - no need to rebuild processes.

- **Prepare Once:** Set up your onboarding checklist, data fields, documents, and automations - one setup for all future workflows.
- **Collect What's Needed:** External parties complete a clean, guided journey to submit details, upload documents, and sign agreements.
- **Everyone in Sync:** HR, IT, Finance, Payroll, and vendors receive structured tasks with full visibility of what's done and what's pending.
- **Deliver a Confident Start:** Every onboarding ends with validated data, completed documents, and a complete audit trail - without anyone needing to chase.

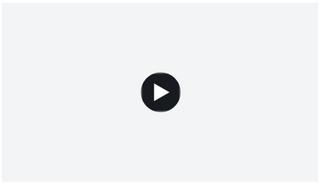
Results that speak for themselves



"Autopilot Onboarding has transformed our internal processes. What used to take days now takes hours. The visibility and control are unmatched."

Jane Doe
Operations Manager, Tech Solutions Inc.

"The ease of setting up workflows and the clarity it provides are game-changers. Our team is more efficient, and we can make quicker, more informed decisions."

John Smith
Product Lead, Innovate Corp.

"Finally, an onboarding solution that truly understands B2B needs. The customizable features and robust reporting have saved us countless hours."

Emily White
Marketing Director, Global Brands Inc.
